Invoicing of chargeable weight

Dear Valued customer,

Oslo Seafood & Cargo Center AS will implement handling invoicing based on chargeable weight as of 1st January 2021.

We see that charging of gross weight for cargo handling implies that all cargo is equal in volume, however this is not the case. We have a higher handling cost when it comes to volume shipments.

Therefore OSCC Management have decided to implement invoicing for cargo handling based on chargeable weight on AWB. In the event chargeable weight is not mentioned on the AWB we will use industry standard of 1:6 = 1m³ = 168 Kg

Our cargo system will be upgraded in advance so that this will commence automatically as of 1st January 2021.

In the event that you would require a Annex to the existing SGHA Annex B we will appreciate to let us know in order for us to prepare the Annex and send this over to you.

Yours sincerely,

Wouter Severs

Customer Relations & Security Manager
